

# SIZING CHART

- Use a ruler to measure against the ruler on the left to see if your chart has been printed correctly.
- Place your child's foot accurately on the chart to see what size to order.
- Your child must be standing when doing this.
- The sizes on the chart indicate the inner sole length of the shoe.
- You need to add 5mm-10mm to your child's measurement otherwise the shoe will be too small.

0-18 Months: Your baby's foot will grow an average 5mm every 3 months.  
19 Months - 4years: Your baby's foot will grow on average 5mm every 4 months.

**\*Please note:**

This chart is only an indication of the length of shoe. Most of our shoes are suitable for wide or narrow feet. Please consult each product description to see if there are any guidelines for the width.
